1 My Career Goal

My Career Goal is to graduate with a computer science degree and work in the tech industry. I would like to be hired and join a recognized company like Google or Microsoft.

I want a Company that allows me to be flexible and provides me with opportunities to grow and explore. One of my biggest dreams is to travel and get to know places, people, and cultures I'm still on my path to discovering the right concentration but I'm sure it's in the tech field.
